CS AI Use Policy

CSCI AI Use Statement:

AI is an increasingly valuable tool and technology in the computer science arena. We need to explore its application in parallel to traditional learning. When specified, you may use AI in targeted ways to enhance learning and to build expertise with the AI technology. The instructor will advise when AI use is permitted and to what extent. If you follow four fundamental guidelines you won’t risk integrity breaches: follow instructional guidance, if it feels wrong it probably is, when in doubt ask, and always provide attribution as detailed in the previous section.

Guidelines:

We will evolve this list over time as questions and rules evolve.

AI used for material consumption is permitted: podcasts, notes, summaries, quizzes
